

**Multi-Link™ Control Systems**  
A Family of Interfaces for Home Automation

Multi-Link™ Control Systems provide maximum flexibility for System Integrators and are compatible with Somfy's full range of motors and controls. It's now possible to interface with various protocols including Infrared, Radio Technology Somfy™ (RTS), RS-232, dry contact and X-10 for seamless integration with third party automation systems.

**Nyabone**

Go Organic with Good Reason!

**Vida**  
ORGANIC TREATS  
As Good As Life Gets!

**Why Vida?**

- No preservatives, No Added Color, No Salt, No Wheat, Nothing Artificial!
- Highly Digestible Gluten Free Formula!
- Fortified with Vitamins, Fatty Acids and Proprietary blend of healthful Oils.
- Certified Organic by Oregon Tilth
- Veterinarian Developed and Recommended.

**certified ORGANIC**

**OTICO** **USDA ORGANIC**

**MANAGEMENT OF DYNAMIC FACADES...for environmental comfort.**

Do you know a simple design solution can increase the value of your client's assets?

**croci**

We want your home to be...

**Nobody Understands the Shutter Business Quite Like Croci**

- EXPERIENCE**  
Croci has over 45 years of experience in the shutter industry with manufacturing facilities in Europe, Middle East, Indian Ocean, Australia, South America, the Caribbean and the United States.
- QUALITY**  
Croci North America uses local vendors and imports what is not available locally from only the highest quality raw materials manufacturers from Europe. Products are shipped after a most rigorous inspection by Croci's Quality Control Department.
- RAPID SERVICE**  
To service customers more efficiently, the Croci manufacturing facility in Fort Myers, Florida, maintains a large inventory of materials for immediate delivery. Custom length orders are manufactured.

Croci rolling shutters provides your home with protection, security and savings with a reliable and user-friendly product. With the simple touch of a button you can open and close your shutters to control the comfort and security of your home.

**NATURAL VENTILATION** ...to create and enhance.

Natural ventilation, as a supplement to mechanical air-conditioning, is a particularly promising avenue of research. Smart motors for window louvers behave differently in a wide variety of situations requiring ventilation, night cooling and air-conditioning. In addition to the effect of reducing energy consumption, it even regulates them as in the case with some "green buildings".

**Realized Facts:**

- A 1994 study identified a 60-70% reduction in peak building systems capacity with occupants of naturally ventilated office buildings, as compared to occupants of fully mechanical conditioned buildings with mechanical ventilation. (Mitsuru et al 1994)
- A 2000 study identified a 1.7% improvement in productivity with every 1°C reduction in the building temperature. (Mitsuru et al 2000)
- A 1999 study identified a 10% reduction in heat stress, a 10% reduction in required frequency of water complaints, and a 10% reduction in required ventilation system capacity, as compared to naturally ventilated buildings, as compared to mechanically ventilated buildings. (Mitsuru et al 1999)
- A 2000 study identified a 21.1% reduction in heat stress when workers are assisted with horizontal systems when workers are assisted with horizontal systems compared to a conventional office ventilation system. (Mitsuru et al 2000)

**CLIMATE CONTROL** ...efficiency and convenience.

The exterior wall, which includes windows, is the principal point of heat transfer between the inside and the outside of the building. Windows covering can be installed inside or outside the exterior wall, or within the glass structure. When they are attached to control heat gain and heat loss through the glass surface. Natural ventilation, such as night cooling, significantly decrease the indoor temperature, without any inconvenience for the occupants, and prevent excessive temperature rise during working hours.

**Productivity versus temperature**

An increase of 1°C (over 72°F) causes a 1% loss in productivity.
